EDUCATION

Degree/Certificate	Institute/Board	CGPA/Percentage	Year
BTech (CSE)	Bharath University	82%	2021-25
Intermediate (MPC)	Sri Chaitanya Junior College	84.2%	2019-21
S.S.C	St. Mary's High School	90.25%	2019

EXPERIENCE

Trainee Software Engineer
Aapthi Technologies | Oct 2025 – Present

Responsibilities & Contributions:

- Developed and maintained an Admin Dashboard using Python, Django, and MongoDB, designing responsive frontend components with HTML, CSS, and JavaScript to ensure smooth user interaction and efficient data management.
- Worked on building a dynamic and responsive RTO Vehicle Information platform that allows users to fetch vehicle registration, owner, insurance, and challan details from registration numbers. Integrated frontend with backend APIs for seamless data flow.
- Developed drama app dashboard using MERN stack.
- Assisted in testing, debugging, and improving application performance.
- Contributed to content creation and documentation for internal and client use.
- Participated in requirement analysis and team discussions.

TECHNICAL SKILLS

- Programming Languages:** Python
- Frontend:** HTML, CSS, JavaScript, React.js, Next.js
- Backend:** Django, Nest.js, Express.js
- Databases:** SQL, MongoDB, PostgreSQL
- Tools:** Git, GitHub, GitHub Desktop, VS Code

PROJECTS

- 1) Sign Language Recognition System Using Machine Learning:** Developed a real-time Sign Language Recognition System using Machine Learning to accurately interpret American Sign Language (ASL) hand gestures and convert them into corresponding

text.

Workflow

- Data Collection:

Used Python script (data_collection.py) to collect gesture images with hand-tracking using MediaPipe & OpenCV. Each image was saved in label-based folders.

- Labels Creation:

Stored labels in a text file (labels.txt) representing each ASL character/sign used for classification.

- Model Creation:

- Used Teachable Machine to train the model with the collected dataset.
- Exported trained model as keras_model.h5 to use in real-time recognition.

- Testing/Prediction (test.py):

- Used the trained model for live hand sign recognition.
- Displayed predicted sign using OpenCV's real-time video feed.
- Used CVZone and MediaPipe for hand detection and tracking.

- Outcome:

- Successfully recognized and displayed ASL gestures in real-time.

Tools & Technologies Used:

- **Languages:** Python
- **Libraries:** OpenCV, CVZone, MediaPipe, NumPy, Math, Time
- **Other Tools:** Teachable Machine (Google)
- **Model File:** keras_model.h5 (Trained model file for ASL sign classification)
- **Dataset:** ASL (American Sign Language) Signs Dataset.

2) Personal Portfolio Website:

- Designed and developed a modern, responsive personal portfolio website to showcase my skills, projects, education, and professional experience.
- Built with Next.js for fast performance and smooth user experience.
- Showcases projects, skills, education, certifications, and work experience.
- Responsive design that works seamlessly across all devices.
- Deployed and hosted on Netlify with continuous deployment.

Tools & Technologies Used: Next.js, HTML, CSS, JavaScript, Netlify, Vs code.

TRAINING

- Completed Python Full Stack training at PySpiders.
- Learned Python, SQL, HTML, CSS, JavaScript, Django with real-time projects and interview preparation.

CERTIFICATIONS

- Completed Python Full Stack Development from PySpiders Training Institute.
- Completed Python course from Udemy.

ACHIEVEMENTS

1. Selected for QSpiders Incubation Program for Python Full Stack through campus placement.
 2. Awarded "Best Student of the Year" and served as Sports & Group Leader.
-
